“OUR FAMILY SERVING YOUR FAMILY SINCE 1976”

## WHAT'S NEW

It's hard to believe it is already fall. It's my favorite time of year. Between football, the start of college basketball, and harvest, it seems like the activities are endless.

It's also time to start thinking about preparing your diesel for the cold winter months ahead. Starting October 1st, we begin adding our winter additives to all of our diesel, including tank wagon, cardlocks, and our CJ Express locations. These additives help lower the cloud point an additional 12-16 degrees. The cloud point for most of our fuel is around 11 degrees.

Adding the #1 blend also helps diesel work in even colder temperatures. For every 10% of #1 added, diesel can work 2-3 degrees colder. When adding either winter additives or #1 diesel, it's important to ensure your equipment is near empty in order to achieve the full effect. For example, if you have a 50/50 blend of farm diesel in your fuel storage tank, but your tractor is half full, the result is only a 75% #2 blend / 25% #1 blend. That percentage can be the difference between equipment working properly and equipment freezing up.

If you have any questions about treatment for your winter diesel, please give me a call. Thanks for letting our family serve your family.

Chad Kramer

Starting October 1<sup>st</sup>,  
we will begin blending  
our diesel to prepare for  
cooler temperatures.

Are YOU preparing  
for winter?

## DID YOU KNOW?

Out of 12 staff members at Kramer Oil, eight are trained as delivery drivers. What does this mean for you? Having more drivers allow us to serve you better. During your busy times when you might need fuel quickly, you can be assured we have the staff and the equipment to meet your needs immediately.
